## Professional Career

---

Since 10/17

### **HARMAN Internation / HARMAN Connected Services Program Manager**

Job description professional and technical as Program Manager (Program: Daimler NTG7, HARMAN as TIER1)

- As Program Manager I am responsible for managing the software overall development lifecycle of a program.
- Communicate the status and coordinate escalations to both the internal and external customers. The responsibility includes not only planning the product development and testing, but actively managing the SW deliverables, reporting status against the plan, and leading the resolution of issues that are blocking the team from making progress.
- Program Manager: Overall/Software responsibility:
  - Software Development
  - System Test
  - System Architecture
  - Agile Transformation
  - Close technical alignment with functional departments
  - Change Management (internal /external Change Control Boards)
  - Transition from prototyping to production incl. Ramp-up & handover in production
  - Reporting towards customer and internally incl. management board (CEO-level)
- Experience with the following quality and management development standards and processes: PMI/CMMI, Agile, ASpice, ISO 26262
- Experience in the following technical areas: Automotive infotainment systems, instrument clusters, embedded software.

01/15 – 09/17 **HERE Technologies**  
**Customer Program Manager II – Senior Program Management**

Job description professional and technical as Customer Program Manager (Senior Program manager - Program: AUDI MIB2+, VW MIB3)

- An ambitious and enthusiastic technical project leader in the Automotive field (Customers at al AUDI, VW. TIER1 at al Continental, eSolution, PCC (TechniSat)).
- Initiator, strong-willed, disciplined, systematisch and appreciative.
- Take leadership to define and drive execution of overall strategic approach.
- Experience with the following quality and management development standards and processes: PMI/CMMI, ASpice, Agile methodologies, Waterfall, ISO 26262. ASPICE: process dimension and degree of maturity. Familiar with levels 0 to 3, audits and improvements.
- Telematics: familiar with Vehicle Telematics System, e.g. Turn-by-turn navigation Remote access, control of vehicle speed, emergency calling, vehicle diagnostics and maintenance notifications.
- Integration internally / externally: overall integration lead and responsibility; first escalation level. Define integration scope and ensure agreement with customer. Manage integration assignments and communication across internal integration teams and into the customer organization.
- Ensure alignment between customer requirements/expectations and HERE capabilities, release schedules. Manage and track internal workstreams and external dependencies and ensure mitigation.
- Support customer discussions on technical domain expert level as needed.
- Pre-sales activities and business development for automotive OEMs
- Offer a complete solution: Database (NDS) and connected car services to the customer cooperating with partners and Product Management

09/06 – 12/14 **Ingenieurgesellschaft: IAV GmbH**  
**Technical project manager (permanent employment)**

- Description of specialized technical Experience:
  - Projectcoordination for Electronic Stability Control (ESC)
  - Project coordinator for the Infotainment System MIBStd2 as service provider to Tier 1.
  - Coordination and communication with the specialized departments of OEM (Original Equipment Manufacturer) and one sub-supplier.
  - Prioritizing, categorizing and planning of error management.
  - Sound knowledge in the field of Infotainment, especially with interface HMI (Human Machine Interface) (classical contexts for example: tuner, media, navigation, map, settings, telephone as well as online services and Mirrorlink).
  - Experience with voice operated systems and driver assistance systems.
  
- Several years experience (since 2007) in the development of series in the field of software development in the following projects:
